

Reasons why companies should go DevOps

*DevOps is a smart economical way of
thinking information technology*

CUSTOMER SATISFACTION

The goal of DevOps is to deliver a higher quality of service and software to the user.

You want satisfied customers
- obviously.

BREAK DOWN THE SILOS

Bridge development and operation, and create agility in your team.

Away with the old department nonsens!

ALIGN DEVELOPMENT AND BUSINESS

When you focus on continuous improvements and shorten feedback loops, you ensure high efficiency and create room for innovation.

It will be beneficial the user and your team.

DIGITAL TRANSFORMATION

Utilize innovations available in new technology to create new digital services that enhance user experience.

BUSINESS AGILITY

The advantage of DevOps comes in business agility, due to the rate of changes and challenges for both small and larger business.

Respond faster on issues.

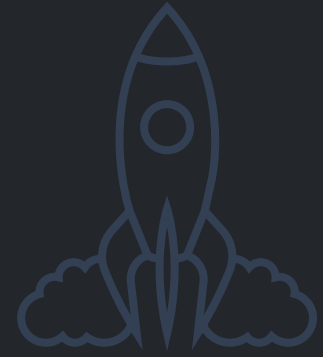

VELOCITY - GET TO PRODUCTION FAST

Projects will move quickly to production when there is a business-needs-first focus. You can't release multiple times a day with manual procedures.

Mission critical delivery 100 times faster.

SPEED = SURVIVAL

With consumers and users moving faster than ever, the need for speed is even more relevant as we go on.

Get dropped if your features can't keep up.

FEEDBACK

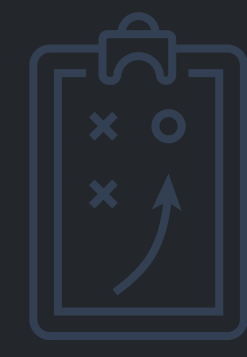

One huge advantage of DevOps is continuous feedback incorporated in development. You do not have to wait for the next big deployment.

Fix issues now, real time.

INNOVATION

The key to digital transformation is innovation delivered rapidly and continuously - and that is the essence of DevOps.

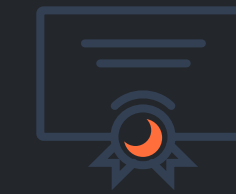

DIFFERENTIATION

One of the main pillars of DevOps is the continuous delivery practices. That gives you the opportunity to ability to adopt and delivery emerging technologies, because your software is always in a release ready state.

Everyone shares the same goals on:

When a department embraces DevOps, everyone becomes accountable for building and running applications.

Quality

Performance

UX

Stability

Security

Time to Market

We service and consult, helping companies improve, and implement DevOps procedures such as Continuous Delivery, Continuous Integration, Continuous Testing.

We know all the tools, and will help you form the perfect setup needed to achieve success.

Continuous Everything – done the right way.

On a mission

Armed with our toolkit, experience and wit, we are on a mission to save the world from expensive excursions into long and suffocating procedures - a relic from the time when that was business as usual.

There is neither time nor need for that anymore.
